

How to Add Weather to your Mac

On my iPhone or iPad I have the weather app readily available , but on my MacBook Pro I use another method. I could go to the App Store and get or purchase a Weather app, then I could put it in the Dock for easy access, but there's another way.

I'm going to use the Weather Channel for this demonstration, but you can use your favorite forecaster. I'm going to search fro the Weather Channel in Safari. Let's open it up and enter your Zip Code to get the local weather.

Now you can pin the tab and have ready access up to date any time. To pin the weather tab, pull down Window>Pin Tab.

If you have this box checked in Safari Preferences you'll get the Weather Channel icon on the pinned tab to help you find it.
