

iPhone OS 12 Tips and Tricks

Here's a few tips and trick for iOS 12

Keyboard as a Trackpad

We've already discussed holding down the space bar on the keyboard to navigate to the misspelled word. But there's another way.

Open Pages, notes or messages and type or paste text. Now Press and hold anywhere on the keyboard and the keys go blank. Now using your finger you can navigate through the text to find the word to fix. It's very accurate.

Notes has a built in scanner

There are many ways to open a scanner to scan a document, here's one more.

Find something you want to scan and open the Notes app. On the bottom you'll see a '+' inside a circle, tap this and you'll get several options and Scan a document is one.

One Handed Keyboard (iPhone only)

Not sure this is something I'd use, but let's see it anyway. Open any app with a keyboard, messages or Notes work well and on the bottom tap and hold the smile face or the world globe and you'll get a choice of a left or right keyboard.
